Mr. Hudson speaks of it as a common occurrence for the horses of a district in seasons of drought to migrate suddenly to some distant place, 50 miles away perhaps, where rain has fallen. A slight breezs from that quarter is enough to set them off. Quickness of Smell In Horses.

A still more striking phenomenon is, be says, familiar to every frontiersman.

The gaucho horse has the greatest terror of an Indian invasion, and long before the maranders reach the settlement—often when they are still a full day's journey from it—all the horses take the alarm and come flying wildly in. The horned cattle quickly feel the contagion, and a general stampedo enance.

THE CRUSHER will cut the cane transversely in pieces about 3 inches long and extract about 50 per cent. of the juice anddeliver the crushed cane in a uniform layer to the 3 roller mill, thereby causing a perfect feed and increased extraction of juice.

THE CRUSHER will leave the "skin" on the cane, thereby giving the juice a better chance to be expelled than if the cane was ripped open subjecting the pulp to the hard packing on the returner bar of the 3 roller mill.

THE CRUSHER will save labor in handling of the cane, as an irregular distribution of cane on the carrier will not materially effect the regular and even feed to the 3 roller mill.
